

SMALL FARMERS

- Use of organic seeds
- Environmentally friendly cultivation
- Higher income
- Neither child nor forced labour

COOPERATIVES

- Purchase of cotton at fair prices
- Training and support for farmers
- Investments in regional infrastructure projects

GINNING

- Automated separation of fibres from seeds
- Ginning without the use of hazardous chemicals
- Availability of new organic seeds for small farmers

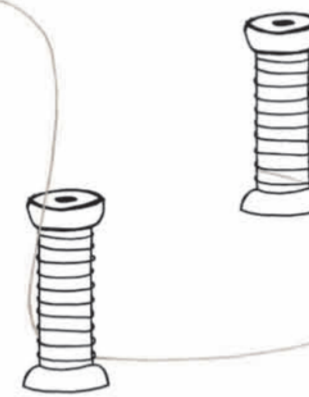

WEAVING

- High-quality fabrics
- Quality assurance
- Eco-friendly and socially responsible process

SPINNING

- Socially responsible production
- Neither child nor forced labour
- Observance of workplace safety regulations

DYEING

- Bleaching and dyeing methods not hazardous to health
- Clarification and treatment of waste water
- Observance of safety and environmental protection regulations
- High consumer protection through avoidance of hazardous chemicals

SEWING

- Fair working conditions
- Protection of the sewers' health
- Occupational safety standards
- Fire and building safety

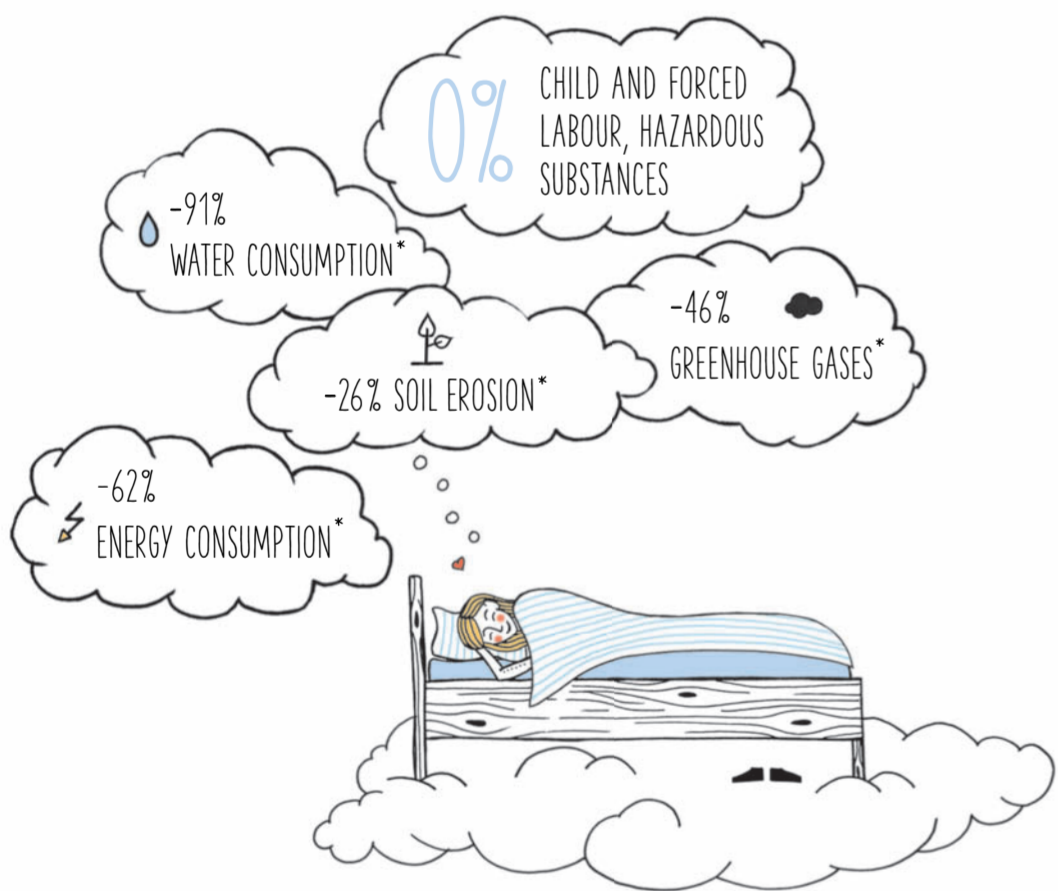

DIBELLA

- Products selected in accordance with ecological, social and quality-based criteria
- Provides sustainable, fair and durable textiles for the European market

LAUNDRY

- Environmentally friendly laundry process
- Sustainable products for textile leasing
- Laundry leasing supports multiple-use cycle

GUEST

- Uses textiles that are free from harmful residues
- Receives ethical added value via the fair textile value chain all the way to the small farmers

HOTEL

- Offers fair and eco-friendly products for guests
- Creates a good feeling and experience during hotel stay

HOTEL TEXTILES – SUSTAINABLE. FAIR. GOOD.

Sustainable textiles improve the living and working conditions of many people. Fair trade allows small farmers in the Global South to earn higher income. Particular attention is paid to the observance of social standards in the entire production chain turning cotton fibre into textiles. Child and forced labour is prohibited at the factories; high safety levels are implemented and fire prevention and evacuation drills must be performed.

Sustainable textiles protect health and the environment – in our own country and in the country of origin. Small farmers cultivate their fields using eco-friendly practices without dangerous pesticides or genetically manipulated seeds. Strict environmental standards are observed at the factories. Thus, the use of hazardous chemicals is prohibited and waste water must be filtered.

Dibella combines the high standards of both GOTS and FAIRTRADE for sustainable hotel textiles. The social and environmental standards defined by these two independent organisations apply along the entire cotton value chain, resulting in hotel textiles that are produced fairly and sustainably. Simply good!
